Cover Letter

Dear Hiring Manager,

I am a mathematician by training and a software developer by vocation, with over five years of experience in designing, developing, and maintaining applications, primarily in .NET environments and service-oriented architectures.

Throughout my professional career, I have worked on developing REST APIs and backend services, integrating with corporate systems, and supporting applications in production environments. My mathematical background has enabled me to develop strong analytical thinking and a keen ability to understand complex systems, diagnose issues, and propose clear and sustainable solutions.

I have actively participated in both building new functionalities and evolving and stabilizing existing applications, including error analysis, log review, defect correction, and supporting users and business areas in second and third-level support scenarios. This approach has allowed me to understand the complete software lifecycle, from development through to production operations.

In recent years, I have also taken on technical coordination responsibilities, which has given me experience working with different teams, prioritizing tasks, documenting solutions, and communicating technical aspects to non-technical stakeholders. However, my primary professional interest remains the development of well-designed, maintainable solutions that align with business needs.

I am currently seeking an opportunity where I can continue growing as a developer, contributing my experience in backend development, services, integration, and production support, while simultaneously strengthening my skills in modern technologies, cloud architectures, and development best practices.

Thank you for your time and consideration. I look forward to the possibility of discussing this further in a conversation.

Sincerely,

Francisco A. Mayorga Cetina

Mathematician - Software Developer
